Mustapha Hatti (Ed.)

Artificial Intelligence in Renewable Energetic Systems

Smart Sustainable Energy Systems

Series: Lecture Notes in Networks and Systems

- Includes recent research on artificial intelligence in renewable energetic Systems
- Features the proceedings of the International Conference in Artificial Intelligence in Renewable Energetic Systems held in Tipaza, Algeria on October 22–24, 2017
- Written by experts in the field

This book includes the latest research presented at the International Conference on Artificial Intelligence in Renewable Energetic Systems held in Tipaza, Algeria on October 22–24, 2017. The development of renewable energy at low cost must necessarily involve the intelligent optimization of energy flows and the intelligent balancing of production, consumption and energy storage. Intelligence is distributed at all levels and allows information to be processed to optimize energy flows according to constraints. This thematic is shaping the outlines of future economies of and offers the possibility of transforming society. Taking advantage of the growing power of the microprocessor makes the complexity of renewable energy systems accessible, especially since the algorithms of artificial intelligence make it possible to take relevant decisions or even reveal unsuspected trends in the management and optimization of renewable energy flows. The book enables those working on energy systems and those dealing with models of artificial intelligence to combine their knowledge and their intellectual potential for the benefit of the scientific community and humanity.
