Advanced Characterization Techniques, Diagnostic Tools and Evaluation Methods in Heritage Science

- Includes advanced scientific characterization techniques and diagnostic tools for the evaluation of cultural heritage
- Includes the preservation of paintings (canvas), metal sculptures and fragments, as well as the examination of stone, ceramics, and concrete materials
- Offers a handbook for conservators-restorers, which they can use during their daily work

This book details the application of advanced characterisation techniques and diagnostic tools to heritage science, including the evaluation of heritage assets' condition, their preservation and restoration. It examines the use of electrochemical techniques in conservation science, with a particular focus on how to solve problems in taking on-site measurements. Specifically, it introduces readers to a new gel polymer (GPE) electrochemical cell developed by the authors for the characterisation of metallic heritage objects. Other techniques used to characterise and monitor reinforced concrete objects in more modern buildings are also covered, including non-destructive electrochemical techniques that allow steel corrosion to be assessed in these structures, and in those that are used to protect and repair such buildings.
