# Economics and Ageing

Volume I: Theory

- **With more courses on health economics and the economics of ageing there is a need for an upper level textbook on current microeconomic and macroeconomic theory, trends and policy**
- **Covers economic considerations associated with all ages, young, middle and old, and considers the ageing of the economic institutions in which individual ageing occurs**
- **Addresses the economic implications of individual and population ageing**

This upper level textbook provides a coherent introduction to the economic implications of individual and population ageing. Placing economic considerations into a wider social sciences context, this is ideal reading not only for advanced undergraduate and masters students in economics, health economics and the economics of ageing, but also policy makers, students, professionals and practitioners in gerontology, sociology, health-related sciences and social care. This volume introduces the different conceptualisations of age and definitions of 'old age', as well as the main theories of individual ageing as developed in the disciplines of biology, psychology and sociology. It covers the economic theories of fertility, mortality and migration and describes the four main frameworks that can be used to study economics and ageing, namely the life cycle, the overlapping generations, the perpetual youth and the dynastic models.

1st ed. 2018, XL, 371 p. 14 illus., 1 illus. in color.
