Tunneling in Soft Ground, Ground Conditioning and Modification Techniques

Proceedings of the 5th GeoChina International Conference 2018 – Civil Infrastructures Confronting Severe Weathers and Climate Changes: From Failure to Sustainability, held on July 23 to 25, 2018 in HangZhou, China

Series: Sustainable Civil Infrastructures

- Presents the advancements in the field of tunnel bore characterization and the associated properties assessment of tunneling spoils
- Sheds the lights on deformation law and stabilization methods of expansive soils
- Offers insights into the design of offshore structures and soft ground tunnels
- Discusses various geoenvironmental issues that are drawing every one's great attention

This book presents new research studies dealing with the attempts made by the scientists and practitioners to address some key engineering issues in tunneling engineering, geotechnical engineering, and municipal sustainability issues that are becoming quite relevant in today's world. With high urbanization rates, advancement in technologies, difficulties in construction of subway tunnel in soft marine clay deposits, and severe ground subsidence due to excessive groundwater withdrawal pose many challenges in their management. Papers were selected from the 5th GeoChina International Conference 2018 – Civil Infrastructures Confronting Severe Weathers and Climate Changes: From Failure to Sustainability, held on July 23 to 25, 2018 in HangZhou, China.
