This book, the first complete textbook on this novel field in Medicine, comprehensively covers the clinical presentation, pathogenesis, genetics, and latest management strategies for autoinflammatory disorders as well as the basic science of autoinflammation. Relevant concepts such as how translational science of genetics and immunology relates to the innate immune system and autoinflammation are covered. Descriptions of the monogenic and polygenic/autoinflammatory disorders are provided. Further topics covered include the latest clinical and genetic diagnostic approaches, the role of autoinflammation in cancer, treatments and management strategies for these diseases, and potential areas of future development. The Textbook of Autoinflammation systematically describes and reviews diagnostic and treatment options for autoinflammatory diseases as well as all aspects of the concept of autoinflammation, and represents a valuable resource for professionals in a variety of disciplines who encounter these patients or who study autoinflammation.

Features:
- Schematic diagrams of gene and immune system pathways involved in autoinflammatory diseases assisting the reader in understanding the genes and mechanisms involved in these diseases.
- Contains chapters focused on sub-specialities of the immune system as well as treatments and sequelae common to many autoinflammatory diseases.
- Provides the reader with an in depth understanding of the currently available and potential future treatments for autoinflammation.
