# From Publishing to Knowledge Networks

Reinventing Online Knowledge Infrastructures

- Thorough analysis of the newest developments in publishing in an electronic environment
- Necessary foundation for anyone who wants to launch an electronic journal or digital library

Information technology will have a significant impact in the publishing industry. Many publishers and institutions are experimenting with new ways of sharing knowledge. Internet sites are becoming more sophisticated, digital libraries and coLaboratories are being built. However it is still unclear, where this journey of change will take us. This book sets out to provide answers by examining a large number of different initiatives that aim to create, share and distribute knowledge electronically. The book also fundamentally rethinks the related processes and shows that information technology has the potential of being much more 'revolutionary' than just accelerating established publishing and review processes. The book shows that deeply ingrained notions of books and articles need to be re-thought. In the future they may be replaced by dynamic networks of knowledge consisting of much smaller units than we are used to. The goal of this book is to provide guidance to those who are developing their own knowledge infrastructures and knowledge networks. The book was written while working at the University of Southern California and I am indebted to my colleagues in the Information and Operations Management Department of the Marshall School of Business. The first ideas for this topic began to take form during a PhD seminar I taught together with Omar El Sawy. I thoroughly enjoyed the creative environment and lively discussions with him.
