Michael Abramovici, Rainer Stark (Eds.)

Smart Product Engineering

Proceedings of the 23rd CIRP Design Conference, Bochum, Germany, March 11th - 13th, 2013

Series: Lecture Notes in Production Engineering

- Presents current research on design of smart products
- Proceedings of the 23rd CIRP Design Conference, Ruhr-Universität Bochum, Bochum, Germany, March 11th - 13th, 2013
- Written by leading experts in the field

The collection of papers in this book comprises the proceedings of the 23rd CIRP Design Conference held between March 11th and March 13th 2013 at the Ruhr-Universität Bochum in Germany. The event was organized in cooperation with the German Academic Society for Product Development – WiGeP. The focus of the conference was on »Smart Product Engineering«, covering two major aspects of modern product creation: the development of intelligent ("smart") products as well as the new ("smart") approach of engineering, explicitly taking into account consistent systems integration. Throughout the 97 papers contained in these proceedings, a range of topics are covered, amongst them the different facets and aspects of what makes a product or an engineering solution "smart". In addition, the conference papers investigate new ways of engineering for production planning and collaboration towards Smart Product Engineering. The publications provide a solid insight into the pressing issues of modern digital product creation facing increasing challenges in a rapidly changing industrial environment. They also give implicit advice how a "smart" product or engineering solution (processes, methods and tools) needs to be designed and implemented in order to become successful.
