# Mycorrhiza

State of the Art, Genetics and Molecular Biology, Eco-Function, Biotechnology, Eco-Physiology, Structure and Systematics

Mycorrhizas are symbioses between fungi and the roots of higher plants. More than 90% of all plant species have the potential to form such associations, which are often essential for optimal plant growth and productivity. Leading experts cover aspects of - structure and function; - molecular biology; - biotechnological applications; - ecophysiology; - systematics.

1995, XVI, 749 p.
