Kirchberger, Sarah

# Assessing China's Naval Power

Technological Innovation, Economic Constraints, and Strategic Implications

- Demonstrates a practical methodological approach for analyzing naval developments in China and anywhere in the world
- In-depth assessments of China's domestic and foreign policy concerns
- Drawing on personal work experience in the naval shipbuilding industry
- Makes the domestic Chinese discourse accessible to the Western reader by analyzing various Chinese-language sources

This book analyzes the rise of China's naval power and its possible strategic consequences from a wide variety of perspectives – technological, economic, and geostrategic – while employing a historical-comparative approach throughout. Since naval development requires huge financial resources and mostly takes place within the context of transnational industrial partnerships, this study also consciously adopts an industry perspective. The systemic problems involved in warship production and the associated material, financial, technological, and political requirements currently remain overlooked aspects in the case of China. Drawing on first-hand working experience in the naval shipbuilding industry, the author provides transparent criteria for the evaluation of different naval technologies' strategic value, which other researchers can draw upon as a basis for further research in such diverse fields as International Security Studies, Naval Warfare Studies, Chinese Studies, and International Relations.
