Compendium of Inflammatory Diseases

- Provides a dynamic single source with up to date, broad and detailed coverage for clinicians and researchers
- Explores the cellular processes and molecular mechanisms involved and the drugs used in the therapy of these diseases
- Collates work by acknowledged international experts on important inflammatory diseases
- Enables readers to keep track with new developments through continuous updates online

Inflammation has become one of the most exciting and rewarding areas of medical research. Recent years have seen a revolution in our understanding of how blood and tissue cells interact and of the intracellular mechanisms controlling their activation. This has revealed the underlying inflammatory pathology of many diseases and provided multiple new targets for anti-inflammatory and immunomodulatory therapy. The Encyclopedia of Inflammatory Diseases will cover the following areas: Inflammatory Processes and Cells, Inflammatory Diseases, Mediators of Inflammation, Pharmacology of Inflammation. Since inflammatory diseases and their therapy cover a broad range of scientific and medical fields, the encyclopedia will be co-edited by four international experts, a clinician and three researchers from the disciplines of immunology, biochemistry, and pharmacology, in this way providing students, basic and clinical scientists and practitioners in academia, hospitals and industry with valuable interlinked information. This living project will serve as a reliable and comprehensive data pool for everybody working in inflammation research. Owing to its dynamic nature, it will grow with time and future editions, becoming an indispensible source of information for academia, clinical practitioners and industry.
