Christian Munthe undertakes an innovative, in-depth philosophical analysis of what the idea of a precautionary principle is and should be about. A novel theory of the ethics of imposing risks is developed and used as a foundation for defending the idea of precaution in environmental and technological policy making against its critics, while at the same time avoiding a number of identified flaws. The theory is shown to have far-reaching practical conclusions for areas such as bio-, information- and nuclear technology, and global environmental policy in areas such as climate change. His many discussions of alternative accounts as well as his drawing out the consequences of his own suggestion in practical cases give the reader a thorough, holistic sense of what justification of PP amounts to. /...
