Enzymatic Polymerization towards Green Polymer Chemistry

Series: Green Chemistry and Sustainable Technology

- Discusses how enzymatic polymerization is desirable for the environment and contributes to green polymer chemistry for the sustainable society
- Explains the combination of enzyme and monomer from which the enzymatic polymerization proceeds
- Discloses advantageous points of enzymatic approach on green aspects concerning clean-processes, reaction selectivity, energy savings, natural resource problems, and carbon dioxide emission
- Deals with recent developments on the enzymatic polymerization and related enzymatic approaches, covering research accomplishments
- Introduces synthetic methods for polysaccharides, polyesters, polypeptides, poly(aromatic)s, and so on by enzymatic polymerization, as well as enzymatic m

This book comprehensively covers researches on enzymatic polymerization and related enzymatic approaches to produce well-defined polymers, which is valuable and promising for conducting green polymer chemistry.
