Detailed attention is paid to the findings and implications of recent research on the myelin-forming glial cells such as oligodendrocytes and Schwann cells. The discussion of myelin pathology encompasses a wide range of diseases and conditions, including, for example, multiple sclerosis, Pelizaeus-Merzbacher disease, traumatic brain and spinal cord injuries, brain tumors of glial cell origin, Charcot-Marie-Tooth disease, immune-mediated neuropathy, and diabetic neuropathy. The authors comprise researchers at the cutting edge of biotechnology and experts in the diseases discussed. The clearly written text is supported by numerous high-quality light and electron microscopy, CT, and MR images.
